OBJECTIVE

Software engineer with a B.S. in Information Systems. Highly skilled in communication and teamwork throughout the last 5 years of my career in B2B sales and logistics. Comfortable speaking to non-technical audiences about technical subject matter. Proven track record of achieving quarterly goals through team leadership. Now looking to pivot into software and web development to pursue a harbored passion for tech. Excited to grow in this industry and join in the creation of innovative products through problem solving in teams.

EDUCATION

University of California, Irvine

Certification, Web Development Bootcamp

April 2018 - October 2018

University of California, Riverside

BS, Business Administration (Information Systems)

August 2013

PROJECTS/APPS BUILT

Forward Support

Service Ticket System that manages IT support requests submitted by employees to the engineering team

- User authentication for admin and employees by implementing JSON Web Tokens and cookie-parser
- SendGrid API for email notifications on ticket creation and status updates
- Sequelize for CRUD functions to save service tickets
- Deployed on Heroku using JawsDB
- Led a team of 5 students for 2 weeks using Trello for project management

Samurai Unicorn

Digital Curation website for video game content

- Giant Bomb and Twitch APIs were called to dynamically display game summary and clips based off user search
- URL parameters from user input were applied to the API calls to carry data to subsequent pages
- Took lead of project on a team of 4 students

“Bamazon” CLI

Online marketplace application accessed through a CLI

- SQL database holds products available to purchase
- Inquirer NPM for user input
